The Town Council Has Quiet Meeting

Court of Revision Rescues Vacation of The Assessor

Before the regular meeting last Monday the Town Council met at a Court of Revision. There were only a few complaints against the assessment and in each case counsel upheld the valuation of the assessor.

After council opened for business, H. E. Jensen was heard. He offered \$250 for the house in which he is living on Fifth street. The offer was not accepted as the price placed on that house at a previous meeting was \$350. The offer of Mrs. J. E. Reid for house on Broadway was accepted.

A letter was read from the Department of Municipal Affairs, drawing attention to the Town Planning expert who had recently been employed by the department, and asking the co-operation of the town in taking advantage of his services at any time the town might need same.

A letter was read from A. R. Buchanan on behalf of the C. P. R., asking for particulars regarding the expense of getting water connection to the station here. The town foreman was instructed to see Mr. Buchanan and give him the information asked for.

Engineer McKay was given permission to tear down a building at the pump station and use lumber for building an addition to the town building down there.

Wheat Pool Districts Are Changed this Year

New District is Created South of Township 16

A meeting of Wheat Pool district C 2 was held at Elmsley Hall north of Buffalo, last Saturday for the purpose of nominating delegates to the Wheat Pool convention. The nomination resulted in C. Axelson, A. Pratt and W. Yake being nominated. It was decided that all three names should stand. Pool members of that district will vote by post card on the selection of one of these nominees to represent them. Other matters of importance were discussed.

There has been a redistribution of Wheat Pool districts in the province during the past year, which makes an alteration in this immediate vicinity. This district referred to above is bounded on the north by township 25 and on the south by township 16. South of township 16 is called A. 10. Last year Mr. Axelson represented the district around Redcliff but this year he is in district C. 2. This will mean that Pool members south of tp. 16 will have to select a new representative this year.

Last August passed through town last Monday on his way to attend a meeting of the U. F. A. directors. Mr. Axelson reports that seeding operations are about completed in the Ringville district and that early snow crops are showing up nicely.

Save Trips to Town

WHEN the Canadian Pacific liner Empress of France and the Pacific Express Company's big steam tug Salvage King rubbed sides near the entrance to Victoria Harbour recently greetings were exchanged between two principal actors in the dramatic drama of Canadian seamanship. They were Captain Banker, former master of the freighter Havilah, and Captain

A. McKENZIE.

Two Town Teams Played This Week

Town Team Lost to Callies and Brick & Coal Play Down With Legion

The two town football teams had a game this week and both teams put up a good showing. The town team lost to the Callies and Brick & Coal played a draw with the Callies.

In its report of the Redcliff-Callies game Tuesday evening the Medicine Hat News says: All the players worked hard and it would be almost impossible to single out any individual as the pick of the bunch. The defence on both sides was sound and there wasn't a flaw in their play. The kicking was clean and the backs repeatedly sent the forwards up the field only to be beaten by the opposing defence. Towards the finish the visitors pressed hard with six forwards and were unfortunate in losing Henderson, just at a time when he was wanted, he having to leave the field through injury. It was a hard game to lose for either side and it was the brand of football that the fans are looking for.

The team lined up as follows: Legion—Staines, Harvey Given, Barnes, Dutton, Johnston, McArthur, Appleton, Williams, Blackburn, and A. Thompson.

Redcliff—Hodge, Willis, G. Davis, Bell, Marshall, T. Fernie, Walters, Henderson, Mackell, W. Fernie, and Walknight.

In the game Wednesday evening the Bricks started out with a rush and for the first few minutes it looked as though a goal would be scored any second to the leg. They could be seen to force a corner. The Callies eventually made a clean get away and a nice run to the other end of the field. From then on to the end of the game the play was very evenly divided, but about half way through, Carpenter got the ball from a scrimmage in front of goal and scored for the visitors. The second half was just up sides having the air of a play through, both sides downing their own. This period was considerably spoiled by the ball going out of bounds an unusual number of times, and by confusing the play too much to one wing. The Bricks worked hard to equalize and towards the end of the game their efforts were rewarded when Patterson cleared from a mix-up in front of goal and landed a nice one. As there was no more scoring the game ended in a draw—one goal each.

The team line-up as follows: Brick & Coal—Stratton, Thomson, Laker, Snowdrif, Lawson, Latham, Patterson, Richardson, Turpin and Poy. Callies—McDonald, Goldie, Cousens, Parr, Robinson, Harrison, Charles, Jackson, Carpenter, Innie Lymer.

MOUNTAIN HIGHWAY IS NOW OPEN FOR SEASON

Of interest to large numbers of tourists is the announcement that Lake Louise Highway and the Banff Windermere Highway have been open during the past week for the season's traffic.

Former Redcliff Girl Weds at Vancouver

HODGES-GRAY

A very pretty home wedding was placed on Friday evening, April 26th, when Jean, eldest daughter of Mr. William Gray and the late Mrs. Gray, of Vancouver, became the bride of Mr. Francis Drake Hodges.

The bride, given in marriage by her father, was a freckle of rose blonde, and carried a bouquet of pink rosebuds. She was attended by her sister, Miss Helen Gray, dressed in deep mauve and wearing a corsage of Russell roses and ferns. Mr. Alfred Hodges supported the groom. The ceremony was performed by Rev. Hugh Ray. In the presence of the two families and immediate friends. Mrs. Kidd, sister of the groom, played the wedding march. The room was decorated with daffodils and primroses, and one table was covered by the lavender-tinted wedding cake. Mr. and Mrs. Hodges will reside in Vancouver.

The bride, Miss Jean Gray, spent her girlhood days in Redcliff and was for a time engaged as stenographer at the town hall.

Four Men Killed In Auto Accident

Farmers of Express District Go Over 20 Foot Embankment

Four men were killed in an auto accident near Express early Thursday morning. They were: R. D. Shannon, Frank Kirby, Ivan Nordstrom and Henry Hoffman.

The four men, who live in the Bowdoin district, were returning from a basketball tournament in Express when their car went over a 20 foot embankment, badly mangled and killing all four. It was several hours after the accident happened that the upturned car was seen by railroad men who notified the police.

Lightning Struck H. J. Cox Garage

Followed Radio Wire to The House And Gave It Bad Shaking

During the severe electric storm which passed over town during the night, the garage owned by H. J. Cox and located at the rear of his residence, was struck by lightning and just a big hole torn in the roof. The bolt evidently followed the radio wire in the garage to the house as there was quite an explosion in the basement which shook the whole house. The floor was raised in several places and plaster was shaken from the ceiling and walls. The radio was also put out of commission and it is thought that all the wires and tubes are burned out. Fortunately no fire broke out but the house was full of dust and smoke from the explosion.

WESTERN PROVINCES ARE TO GET WATER POWERS

The government measure which purports to turn the water power of the three prairie provinces over to the provincial governments for administrative purposes, received the third reading in the House of Commons last Monday. Hon. Mr. Stenoar explained that the Act was designed to meet the requirements of a resolution which passed the House earlier in the session. The basis of transfer was that the water power should be administered in the manner provided for by the British Columbia Water Power Act of 1911.

RED CROSS DRIVE HERE WAS VERY SUCCESSFUL

The total amount raised in the Red Cross drive here last week was \$102.69. All who contributed one dollar or more are entitled to the Red Cross magazine. This magazine gives information about the Red Cross work and is issued from headquarters in Edmonton.

School Enjoys Radio Program Empire Day

W. Campeau Installs Westinghouse Machine For The Occasion

Teachers and pupils at the school thoroughly enjoyed the Empire Day program which was broadcast for the occasion last Thursday.

Through the kindness of W. Campeau, local agent, a Westinghouse radio set was installed in the large hall at the school. Here the pupils assembled and listened to the splendid program which came through the air. As great care was taken in the installing the radio, the program time in splendidly and could be heard by all present. The children were greatly interested in the addresses especially those by the King and Queen.

The department of Education deserves great credit for arranging the program for the occasion. No doubt it is just the beginning of many more similar uses to which the radio will be put in the near future.

U. S. Tariff Changes Passed at Washington

New Tariff Will Have Serious Effect on Canadian Produce

A tariff bill which would have considerable effect upon Canadian exports to United States, was passed by the house of representatives last Tuesday by a vote of 246 to 147. The bill now goes to the Senate.

One of the Canadian products on which duties would be raised are cattle, with beef and hides and leather, sheep, with wool and lambing skins, and pork, potatoes and other garden products; flax seed; dairy produce and hardwood lumber, together with shingles. A last minute amendment adopted would place an import of 20 per cent. ad valorem on wheat entering the country under bond for export to Cuba.

Annual Meeting of The Swimming Pool

Held Last Evening When Officers For The Year Were Elected

The annual meeting of the Swimming Pool executive was held last evening when officers for the year were elected and plans outlined for conducting the pool this year.

Season tickets will be issued at once and it depends on the success of these tickets when the pool will be opened and how long it will be kept open.

There is considerable expense in connection with running the pool and it has been such a source of pleasure to the children, and such a safeguard against going to the river, it is hoped parents will not hesitate in giving the officers the necessary encouragement to keep it going just as long as possible, by buying a season ticket when called upon.

The following officers were elected: President—Mayor H. W. Harts; Vice Pres.—H. J. Stenoar; Sec.—Thomas—C. T. Hall; Ex. Com.—E. H. Wallis, F. Baird, G. Lums, W. Campeau, T. Balmor, E. L. Stone, W. West, C. H. Bushnell, W. Hill, H. Sangster, and J. Kitchen.

COMING TO CAMERO

Two more good shows are booked for the Camero next week. On Monday there will be Douglas McLean in "The Canadian Kid" and on Thursday "Beyond the Sierras." All the color and romance of Old California live again in this picture, the new Two McLean starring vehicle for Metro-Goldwyn-Mayer. In this gripping drama of the picturesque days in which California's early history was being made, bringing to the screen a thrilling romance in which love, born of hate, emerges triumphant.

Tom Hawthorne, premier of the Boys' Parliament of Alberta, was in town this week visiting at Gordon Memorial manse. Mr. Hawthorne is with the Chalmers this season.

AMENDMENT MADE TO THE DIVORCE LAWS

An amendment to the bill respecting the domicile of a married woman, although opposed by a large section of the house, passed when Parliament went into committee to consider the bill. The amendment makes it possible for a woman, deserted by her husband and left living alone for two years, to establish her domicile in any province of Canada where a divorce court exists for the purpose of obtaining a divorce.

DRAMA OF SEA SALVAGE

J. M. Hewson, master of the Salvage King, the former being a passenger of the steam passenger liner. The tug after sixty days out of her own port was returning after performing the heroic feat of lowering the disabled freighter Havilah from Dutch Harbor, Alaska, to Oshaka, Japan, through days of constant gales, terrific seas and under almost every kind of marine handicap, a distance of 8,100 miles.

last, Captain J. J. Hewson of the Salvage King, who is now about 40 years of age, is a native of Oshaka, Japan.

His teacher is a British Sea and stormy North Pacific. At one time with fifty-foot waves crashing over both vessels and only a faint moon peering through moon-filled darkness, the hulls of lumber on the 9,000 ton Havilah shifted and her steering gear went awry and she listed over fast. The sea sinking" went on by night to the little 1,000 ton Salvage King, lifeboats were swung out and men stood by ready to sever the steel tow line with an axletree lynch.

The freighter survived the storm, however, and was towed through gales and rainstorm as seas for nine more days to Oshaka, Japan, arriving on the 10th mile in 25 days. When she met the Empress of France, on which the captain and crew of the freighter were passengers, she was towed during a voyage of 10,000 miles after having performed a task that no other salvage vessel on the Pacific had been able to undertake.

Clean Up, Paint Up, Keep It Up — Increases the Value of Your Property

WORLD HAPPENINGS BRIEFLY TOLD

The government proposes to create a national park in Manitoba, it will be in the Riding Mountains and will embrace 1,000,000 acres.

After half a century as sergeant-at-arms in the Manitoba legislature, John McDougall, 53, died April 30, at his home at Lockport, Minn.

The King ordered conferred on General Bramwell Booth, deposed commander-in-chief of the Salvation Army, the Order of Companion of Honor.

Where the Ashburton-Webster treaty was signed eighty-seven years ago, a plaque was unveiled recently by Kwantlen International as a memorial to the friendship between Canada and the United States.

Ieyama Tokugawa, former councillor of the Japanese embassy at London, and grandson of the late of the Tokugawa shoguns, has been appointed to the newly created post of minister of the Japanese Empire in Canada.

A shipment of \$8,000,000 of gold from Germany arrived recently at New York on the liner "Hamath". Since March, when the present movement of gold started, \$20,923,000 of the metal has been sent from Berlin to New York.

Professor J. B. Sackville, of the University of Alberta, Edmonton, is the newly chosen president of the Canadian Society of Technical Agriculturists. The officers for 1929-30 take over their duties at the annual convention to be held in Winnipeg in June.

Regulate On the Farm. — Every farmer and stock-raiser should keep a supply of Dr. Thomas' Electric Oil on hand, not only as a ready remedy for all the family, but because it is a horse and cattle medicine of great potency. As a substitute for sweet oil for horses and cattle affected by cold it has surpassed anything that can be administered.

Manitoba Highway

A start on the construction of Manitoba's section of the T. and N. Highway eastward to the Ontario boundary, will be made this year, it was announced in the Legislature, when supplementary estimates were before the House for approval. An item of \$200,000 for a start on the highway was passed. The cost when completed will be approximately \$500,000, it was stated.

What Will you do

When your Children Cry for It

There is hardly a household that has heard of Castoria. At least eight million homes are never without it. If there are children in your family there's almost daily need of its comfort. And day night, you may find very thankful that a bottle in the house. Just a few drops, and that colic or constipation is relieved, or diarrhoea checked. A vegetable purgative is hardly necessary for your little ones. Castoria is about the only thing you have ever heard of that is safe and effective for infants. Stronger medicines are dangerous to a tiny baby, however harmless they may be to grown-ups. Good old Castoria! Remember the name, and remember to buy it. It may spare you a sleepless restless night. It is always ready always to ease you in emergencies for every ailment. Give it at any hour of the day or night that baby becomes fretful. It will soothe him, and he never more popular with mothers than he is today. Every drug store has it.

Fletcher's CASTORIA

W. N. U. 1764

Point Painters

In finishing wood it is important that the groundwork be satisfactorily and thoroughly dusted off before the next coat is applied. Dusting is indispensable to the good workmanship, particularly in the case of woodwork, furniture and automobiles, where a high gloss is the aim of the finisher, and this holds good whether the work is to be finished in varnish, enamel, color varnish, or even in a high gloss oil paint. Without the dusting, when other conditions are perfect, work will present a blotchy, dirty looking, and easily soiled appearance, and the higher the gloss in the finishing process, the more this condition will be reflected. "Dusting off" does not mean that the dust is to be scattered from any given surface with a rag or anything that comes handy. It simply means that a soft bristle, painter's duster is to be used and that the dust is not only to be removed from the surface under treatment, but also from everything in close proximity to the scene of operations.

In the application of paint to iron, the first thing to be done is to remove all rust. A mere scratch with a knife will seldom be sufficient; a good scrubbing with a wire brush is more effective. The success of varnishing does not depend altogether on the quality of the varnish, but on the thoroughness of the preparation. The most important are cleanliness, brushwork, surroundings, and a warm temperature.

The first coat on new plaster should be very thin in order that the surface may penetrate and harden the paint so as to form a key for the following coat. Abundance of time should be allowed between each coat.

Split, curled up shingles, even when stained or painted, represent a depreciation far in excess of the cost of periodical painting.

The easiest and quickest way to stir up a can of paint is to pour the liquid from the top, stir up the pigment in the bottom of the can with a flat paddle. For perfect mixing, complete the operation by pouring the paint back and forth, several times, from one container into another.

It is always best to bed ash, because it very seldom happens that ash is perfectly level on its surface, hence does not lie flat against the wood. The bedding putty should not enough to run freely from under the thumb.

Whenever possible, shingles, for at least three-quarters of their length, should be dipped in a vat of asphalt, and after they are laid a finishing coat applied with a brush.

Duster brushes should be washed with soap and water before being used on white woodwork; otherwise they are apt to discolor the purity of the ground.

Chamois skins for finishing work should never be thrown on the floor or allowed to come in contact with gritty substances.

Rare linseed oil and turpentine mixed, is an infinitely better medium than water for keeping brushes soft.

Spots of dirt wall paint from ceilings or walls should never be allowed to dry on the woodwork. They should be wiped off at the end of the morning's work, and again at the end of the day, with a rag soaked in turpentine. A little labor expended in this way will save hours of hard work in the finishing of the floors and woodwork.

The time allowed for drying between coats depends on conditions of temperature, ventilation and surface. This does not mean that a paint manufacturer who declares on his label that forty-eight hours should elapse between coats is merely guessing. Not at all! The product has undoubtedly been tested and manufactured to act on this time schedule under fair conditions, but unfortunately it is likely to be applied under conditions that are decidedly unfavorable—such as cold room, no ventilation, greasy or oily surface—and in such cases the scheduled time of forty-eight hours ceases to possess any value as a reliable guide. As a matter of fact the correct time lapse might be four days—or a week! When the preceding coat is so dry that there is absolutely no suspicion

of "chickening" under a firm pressure of the fingers or hand, the second may be safely applied.

Choosing Upholstery and Drapery Fabrics

There is a far wider range of choice in upholstery materials than in generally utilized. Selections of serviceable and attractive materials are not limited to the tapestries, velours and velvets in which stock pieces (Crested and Beaded) are usually found in the shops.

The following fabrics are suggested for upholstery purposes:

Wool Reps This is a material which comes in 60-inch widths in a selection of staple colors. It is serviceable and inexpensive.

Corduroy Upholstery corduroy is material that should be used for a more widely than it is at present for upholstery purposes. It is attractive, inexpensive and durable.

Cretones, Printed Linens and Printed Mohairs Cretones, printed linens and printed mohairs are highly decorative upholstery materials.

Tulle is a material that is in vogue for recovering old furniture. It is an iron material which is attractive and gives good service. They are suitable for recovering old furniture. It is an iron material which is attractive and gives good service.

Crude color in cretome is to be avoided, but the other extreme of weak or characterless color must be guarded against. Conventional designs in striking decorative effects are less hackneyed than the regulation floral patterns.

Printed linens are usually hand blocked and are softer in outline and color. The hand printing gives a rich texture to the fabric. They are more expensive than domestic cretomes, but pay in the end, as they retain their crispness and color.

It is a more interesting and distinctive fabric than a floral floral type on a broken background.

Repainting Wooden Buildings

It is always good policy to re-paint a building before the previous coat has fallen into a bad state. If the work is done while the old coat is in good condition and the same value of paint is used ("value" referring to color) but to the paint's degree of lightness or darkness, one coat is usually sufficient when a good house paint is employed.

If, however, the old coat has been permitted to fall into a state of disrepair, it will be necessary, in order to put the surface into good condition, to use two and sometimes even three coats of paint.

By the use of a cheap ochre primer, or because the previous painting was applied on damp wood, or because of any other malpractice, the old coat has become hopelessly blistered and is peeling the only safe course is to remove it entirely. If this is not done, the new coat (no matter how good your materials may be, and no matter how carefully you may apply them) will be lifted off by the continued peeling and cracking of the old under-coat.

The best way to remove paint from large surfaces is to burn it off with a blow torch. This method consists of directing the paint with intense heat, generated by the torch, and scraping it off while still hot with a wire scraper. It is a very effective method, and an experienced man for this work.

After the old coat has been entirely removed and the surface of the wood sand-papered and dusted off in the usual way, the building should be painted in the same manner as directed for new wooden buildings.

Usually an old coat which is in good condition will be removed by treatment with a coarse wire brush and scraper in order to remove the new loose particles adhering to the surface. It should then be dusted off and given two coats of paint.

The first coat is prepared in the following manner: If the surface seems unusually porous, a half-gallon of pure raw linseed oil and a pint of turpentine should be added to each gallon of paint. If the surface is hard and smooth, omit the oil but add a pint of turpentine to a gallon of paint.

The second coat of paint should be applied as it comes from the can. Both these coats should be applied with the same care as is given to a new job and the general directions for painting that building should be re-read and followed.

Staining Shingle Roofs

Use a good shingle stain. Before beginning the work, see that the roof is dry and free from dirt.

As a matter of economy it is better to dip shingles in liquid before laying them. Dip them in and out as quickly as possible and wipe them off by rubbing across a stick covered with kauri. Then allow them to drain off in a drip trough.

The stain should be applied for only about two-thirds of their length. Stain the exposed ends only.

Paint is best for old, weather-beaten shingles, blackened by age and exposure. The staining coat should be prepared as directed for house painting and should be brushed out with careful attention to the color of the shingles.

The second and finishing coat should be applied as it comes from the can.

A Reasonable Question

An eager looking urchin approached a man hurrying towards the railway station. "Carry your bag, sir," he asked. "No," snapped the man. "I'll carry it all the way for you," he said. "I tell you I don't want it carried," snarled the man. "Don't you?" "No, no!"

Whereupon the lad broke into a quick trot to keep up with his victim's hasty strides, as he asked, in innocent curiosity, "Then what are you carrying it for?"

Typhoon Of Railway
Half a million miles of rail, 120 miles of fencing, 55,000 tons of rails, and more than a million created sleepers are annually by the London and North-Western Railway to maintain this 7,000 miles of line.

London has more than 20,000 vehicles—English policemen.

Floor Coverings

Next to the walls and ceiling, the floor presents the largest area in the room, and consequently its covering should be well thought out and carefully selected.

The floor, as well as the ceiling, is a plane which holds the four walls of the room together. While the walls form the background for furnishings, the floor is the foundation. A good foundation is always essential to any well-designed decorative plan.

Linoleum floors are attractive, resilient, shock-absorbing, durable, warm in winter and cool in summer. Wearing linoleum gives it a softer, smoother texture and preserves its luster.

For the average room, a rug with a plain ground and a neat border, or a rug with a decorative pattern, is more desirable than one with a decided pattern.

Large and bold patterns have a decided tendency to make the room look smaller. The patterns are apt to be just as the ideal floor covering furnishes the foundation for furnishings it must be made to keep its place on the floor. When there is a great deal of furniture, a boldly figured floor covering gives a confused appearance to the room and destroys the effect of the room's appearance.

Boldly patterned rugs usually come in strong colorings, and this also makes them exceedingly difficult to fit into a soft, harmonious color scheme.

Figured floor coverings, however, have their place in rooms which are sparsely furnished or where the furniture is of a light and simple type. They add to the room's appearance of the room. That is, they take away bareness. In large rooms which are sparsely furnished, figured rugs are particularly advantageous.

In dining rooms, it is usually preferable to have a figured floor covering, as it does not show soil or stains so quickly as plain floor coverings.

In bedrooms where the furniture is of a light type, a figured floor covering adds to the comfortable appearance of the room. In sleeping porches, enclosed porches or breakfast rooms, where the furniture is not usually plentiful, either the effects of a bold figured floor covering adds greatly to the finished appearance of the room.

It is a wise plan when a highly figured floor covering is used to use hangings or upholstery material in a plain color or in a neat and unobtrusive pattern. On the other hand, if the hangings or upholstery is figured, plain floor coverings are best. Too many figured hangings in a room create the feeling of restlessness and the effect produced lacks restraint.

Too many plain surfaces, on the other hand, tend to make a room look bare and uninteresting. Some figured material should be used in the room, but it should be balanced with a proportionate quantity of plain material or surfaces without design.

In selecting a figured pattern, the colorings must be considered first. For general use, strong or vivid colors should never be selected. Small, all-over patterns are, in most cases, preferable to large sprawling ones. The tone of the floor covering should always be deeper than that of the walls or furniture, as the ground we walk on is always darker than the sky or the landscape. Light-colored floor coverings are exceedingly difficult to fit into a harmonious scheme.

The tone of the floor covering should always be deeper than that of the walls or furniture, as the ground we walk on is always darker than the sky or the landscape. Light-colored floor coverings are exceedingly difficult to fit into a harmonious scheme.

In selecting a figured pattern, the colorings must be considered first. For general use, strong or vivid colors should never be selected. Small, all-over patterns are, in most cases, preferable to large sprawling ones. The tone of the floor covering should always be deeper than that of the walls or furniture, as the ground we walk on is always darker than the sky or the landscape. Light-colored floor coverings are exceedingly difficult to fit into a harmonious scheme.

Laying and Preserving Linoleum

The ideal method of laying linoleum is to cement it over deadening felt paper, which should first be pasted to the floor with any standard make of linoleum paste. This prevents coming bulging and stretching, or opening up of seams and cracks along the edges. It also prevents water from getting underneath the linoleum, and in that way prolongs the life of the flooring.

Linoleum laid in this manner becomes a solid, permanent, elastic floor. It cannot buckle or stretch. The felt paper foundation allows all expansion or contraction that may take place in the wood floor and makes the linoleum more durable. It also allows the linoleum to be removed without difficulty or damage should the necessity arise.

The most approved manner of treating linoleum has been found to be waxing. The wax should be carefully rubbed on and the floor polished like hardwood. An occasional treatment of this kind will keep the linoleum in an immaculate condition. A damp cloth removes all soil from the waxed linoleum and it will be found that scrubbing is entirely unnecessary.

In case there should be obstinate marks of soil on waxed linoleum, they can be removed with a pad of fine steel wool without scratching or damaging the linoleum itself. Finishing the best of printed linoleum, as it brightens and preserves the original pattern and makes the linoleum easier to clean. A coat of good varnish or white shellac will also many carpet cork.

Many Varieties Of Bananas

Although most of us know only two varieties of bananas by sight, there are numerous others, the Philippines Islands raising fifty-seven, Malaya, thirteen, Spain, ten, and Burma, eight.

Australia supplies one-fifth of the world's supply of wool.

Mixed Farming Is Becoming Popular

Various Reasons Being Taken Up By Saskatchewan Farmers

Not a week passes but that a new evidence of the progress of Saskatchewan are taking hold of various phases of mixed farming. At Saskatoon, Sask., it is the opinion of the dairy branch of the Department of Agriculture, has been giving some interesting and helpful suggestions and talks to farmers on how they can improve in dairy methods, and in the course of which he declared that feeds grown on Saskatchewan farms could not be exported anywhere in those ingredients that make for successful dairying. He also proclaimed that in four or five years Saskatchewan herds would be amongst the leading herds on the continent. And now from H. M. Pugh, provincial apiarist, in an address over the radio comes fine encouragement for Saskatchewan bee producers. A year ago, he pointed out, there were 920 registered beekeepers in the province and today there are 1,200. There is a 25 per cent increase of 50 members in the association since March 1 of this year.

Manitoba To Spend Large Amount On Highway

Manitoba Has Ambitious Building Program For This Year

A start on the construction of Manitoba's section of the trans-Canada highway eastward to the Ontario boundary will be made this year, it was announced in the legislature when supplementary estimates were before the House for approval. An item of \$200,000 for a start on the highway was passed. The cost when completed would approximate \$500,000, it was stated. A capital account item of \$1,000,000 to provide additional accommodation for the University of Manitoba was approved. An ambitious road building program, involving the construction of 500 miles of new highway and re-surfacing of 568 miles of truck roads, at an aggregate cost of \$2,600,000 was outlined. In addition, \$1,000,000 was allocated for road work. Manitoba during 1929 will total \$20,000,000, including work to be done by the municipalities under the Good Roads Act.

Paying the Royal Doctor

Chinese Emperor Almost Stopped Salary When He Was Sick

The amount of the remuneration of the King's physician to Canada is a speculation in some quarters, but it is to be wondered how they would have fared under the reign of the great Kien Lung, Emperor of China. One day this monarch inquired of a traveller how physicians were paid in England. With some difficulty he was made to comprehend the doctors were paid for the time they attended their patients in a sickness. "Why," exclaimed the Emperor, "is any man well in England who can afford to be ill? Now, I will inform you how I manage my physicians: I have four to whom my health is committed; a certain weekly salary is allotted them, but the moment I am ill their salary stops till I am well again. I need not inform you that my illnesses are very short."

Twenty Years Old

While radio broadcasting is but eight years old, how pioneering it has been in operation for 20 years. The first law on radio was the wireless dip act of June 25, 1910, which specified that any ship carrying over 50 persons must be equipped with a wireless transmitter and receiver capable of sending messages at least 100 miles.

A hen has been known to live for 89 1/2 years.

"Your wife has coughed all night. Why didn't you send for me before?"

"Until tonight I was no so bad. I put cotton wool in my ears."

Laufelge Kohler-Zeitung, Cologne.

Canadian National Railways Additions and Betterments

Extensive Program of Work Shows Big Estimate Presented To Parliament

Additions and betterments to the Canadian National Railway system, amounting to approximately \$25,000,000 are to be carried out in 1929. This work is provided for in the estimate tabled in the House of Commons by the Minister of Railways and Canals, Mr. J. G. Macdonald, on June 10.

The net financial and capital requirements of the railway for the year 1929 are placed at \$200,700,000. These requirements, however, include provision for sinking fund, principal payments, interest, etc.

The \$25,700,000 for capital expenditure planned will be spent on general additions and betterments to the physical property of the railways. This work will include laying of heavy rail, new double track and grade revision to facilitate grain movement, extension of sidings and passing tracks, extension of freight and passenger yards and terminal facilities, new ships for the Pacific coast, and numerous other items requiring the use of working capital.

Continuing the policy of increasing the output and laying of 100 miles of rail on the main line between Halifax and Vancouver, this work, which has been under way for many years, will proceed on the Atlantic coast and Vancouver. It will include 916 track miles of new heavy rail to be provided, requiring the purchase of 1,200,000 tons of steel at a cost of \$9,000,000 including rail fastenings. The amount, \$1,125,000, is chargeable to capital account.

Work on the main line will be laid on the Eastern line, 334 on the Canadian, excluding Eastern line, 321 miles on the Western line, and 60 miles on the Grand Trunk line. The work on the Atlantic coast will include 1,200 miles of new heavy rail to be provided, requiring the purchase of 1,200,000 tons of steel at a cost of \$9,000,000 including rail fastenings. The amount, \$1,125,000, is chargeable to capital account.

In addition, a new rail of heavy standard referred to in the foregoing work will be used on branch lines and various lines, totalling 400 track miles. This will include 1,200 miles of new heavy rail to be provided, requiring the purchase of 1,200,000 tons of steel at a cost of \$9,000,000 including rail fastenings. The amount, \$1,125,000, is chargeable to capital account.

In extending the use of heavier rail, the plates, rail anchors and cross-ties are required in more extensive scale to obtain the highest possible standard of road, necessitated by the increasing use of heavy tonnage, all of which must be provided for economical operation. The plates to the total of 4,000,000 will be required in 1929, at a capital cost of \$2,500,000. The anchors and cross-ties to the total of 4,000,000 will be required in 1929, at a capital cost of \$2,500,000.

The 1929 grain movement between Winnipeg and the head of the lake, two stretches of double track and a grade revision have been planned. One such stretch will be from South Junction in Manitoba to the head of the lake, two stretches of double track for this year is from Chappell Junction to South Saskatoon and its line with the general scheme of extension and improvement of the line in the neighborhood of Saskatoon.

It is proposed to extend local freight facilities at various points over the system and funds amounting to \$2,500,000 are required for the development and extension of terminals and of local freight facilities. One such project is at Charlottetown, P.E.I., where a new terminal and a new stretch of an engine house. Other points affected under this heading are at St. John's, Ontario; Warrenton, British Columbia; Niagara Falls, Ontario; Winnipeg, Manitoba; and Port Mann, British Columbia.

For the extension of commercial facilities for the Canadian National Railway, and the development of railway telegraph system, the sum of \$2,500,000 is being provided. Part of this sum will be devoted to further extension of the carrier current system which has added greatly to the facilities available for the increasing business of the Dominion.

For the hotel system of the company, important improvements have been included in the estimates. For example, the new Laurier Hotel at Ottawa, \$1,000,000 in value, is included in the estimates. When completed, the hotel will have 325 guest rooms. During the past five years there has been an increase of 25 per cent in the number of guests at the hotel.

At Halifax, Nova Scotia, under the construction in conjunction with the new terminal arrangements, will be completed and opened for business by the Fall of 1929. Since the inauguration of the new Canadian National steamship service to the British Isles, the new hotel at Halifax, the first class hotel accommodation at Halifax has become more pressing. The construction of a hotel at Halifax, the first class hotel accommodation at Halifax has become more pressing. The construction of a hotel at Halifax, the first class hotel accommodation at Halifax has become more pressing.

The construction of a hotel at Halifax, the first class hotel accommodation at Halifax has become more pressing.

ation and steel work, which will be completed during 1929, is as well as considerable portions of the general work incidental to the structure, the whole of which will be completed on a new hotel and \$200,000 has been allocated for this work.

At Saskatoon, the new hotel at Saskatoon, the first class hotel accommodation at Saskatoon has become more pressing. The construction of a hotel at Saskatoon, the first class hotel accommodation at Saskatoon has become more pressing. The construction of a hotel at Saskatoon, the first class hotel accommodation at Saskatoon has become more pressing.

Changes, extensions, improvements and reconditioning are necessary in other resorts and hotels of the Pacific Coast. The Grand Hotel, Victoria, the Port Arthur and the Prince Edward, which will necessitate a total expenditure of \$770,000.

Improvements of equipment and work equipment required during the year will amount to an expenditure of \$2,500,000.

Trains demands on the waterborne service at the Pacific Coast have increased greatly and it is proposed to acquire the fleet now in operation from Vancouver and Seattle for the operation of the steamers for this line, and from the Alaska coast for the operation of the steamers for this line.

Family Of Joan Of Arc

Reunion Of Living Members Took Place Recently

The thirty living descendants of the family of Joan of Arc, recently held a family reunion and formed a family association to take part in the 500th anniversary of the birth of the saint. Her proper work was finished in 1429 when Orleans was delivered from the English invaders and the French King was brought to be crowned in Rheims Cathedral.

One Of Oldest Minerals

Glimsile Is In Great Demand For Manufacturing Purposes

Glimsile is said to be found only in Utah, U.S.A. It is a brilliant black substance, similar to asphalt and is one of the oldest known minerals in the world. Although discovered in 1862, it was not successfully marketed until 1904, when a railway track was laid to the rich Black Dragon vein in the Utah State. Today it is in great demand all over the world, and its use in manufacturing has increased rapidly. It is used in the manufacture of paints, varnishes, ink, and other products. Early settlers thought glimsile was a new variety of coal, but when they tried to burn it, it gave off a dense black smoke with a peculiar odor. Instead of being reduced to ashes, the material melted and drew out into tar-like threads.

The mineral is exceedingly brittle and difficult to mine, as it is of a chocolate-colored dust, and when operations begin. This dust settles upon the heat of the body and penetrates the skin. Water will not remove it and relief has to be obtained from heavy oil, alcohol, or turpentine.

Western Manufactures

Over \$377,000,000 Produced in Western Provinces Last Year

Manufactured products of the four provinces during the past year exceeded the sum of \$377,000,000 in value, according to J. W. McArthur, chairman of the prairie division of the Canadian Manufacturers' Association, at the annual meeting of the association in Winnipeg.

Utilization of the mineral wealth of northern Manitoba and Saskatchewan and exploitation of Alberta's resources promise tremendous increases in the industrial output of the three central provinces, he stated.

Price Of Wales Quilts

Perhaps it is the weight of responsibility now falling on his shoulders that makes the Prince of Wales appear much more matured than of yore. He is invariably wrapped in thought, even to the extent of being a little absentminded. It is also noticeable how high in his manorisms, as well as much less buoyant.

Believes Women Are Happier Than Men

English Writer Claims They Get More Happiness Out Of Ordinary Things Of Life

On it to be proved that "women are temperamentally happier than men" Florence A. Kilpatrick in the London Daily Mail.

Statistics cannot show a state of mind, but they reveal the fact that barely thirty per cent of the population who take their own lives are women, for they numbered 1,500 out of the 6,000 suicides in England and Wales last year.

It is certain that women are not inclined to get so dependent on misfortune as men; their courage is usually more moral than physical; therefore they are quicker to see the silver lining to the cloud, the consolation. On the other hand, they get more diversion out of the ordinary things of life. Can that be described by the Registrar-General as "the average man" and a joyous adventure in the mere buying of a hat?

Could he be happy and amused for an entire day just by altering the disposition of a room and rearranging the furniture? Does he allow himself the mental relaxation of writing a long gossip column, or a room and rearranging the furniture? Does he allow himself the mental relaxation of writing a long gossip column, or a room and rearranging the furniture?

Observe the faces of the people in the streets, she says. Men walk as if with a preoccupied and grave expression; it is the women who look alert and smiling. The Japanese women are the most cheerful in the world in their attitude toward the fair sex—have an old proverb which declares, "Men laugh with their hearts; women only with their mouths."

If there is a hint of truth in this it suggests that the deeper emotions are nearer the surface; but more sensitive, they can get a deeper enjoyment out of life. Whether one agrees with Mrs. Kilpatrick or not, there is food for thought in the suggestion that much happiness and contentment lies in the power to enjoy the simple things of life. A sensitive appreciation of the small pleasures of life is a source of deep and lasting enjoyment. It is an attitude of mind that can be cultivated. An eminent psychologist advised those who wish to be happy to learn to enjoy the everyday "things"—to breathe deeply of the fresh air, to listen to the birds, to look around with really seeing eyes at the trees and hills and the sky, to have consciously the fragrance of cooking food, to reflect on how many things there really are in the routine of everyday life which we take for granted but which and which are so surely to happiness and contentment.

Home Market For Cattle

Canada Could Very Easily Take Her Meat Production

Speaking at a recent report of the falling markets for Canadian cattle, the Senator Wiley asked the question: "In the future will we eat our own meat?" He added: "Our home market now takes 45 per cent of our beef production. Can we not in some way develop that market to take the entire 100 per cent? That is the problem that confronts the cattlemen today, and I believe with the combined efforts of all livestock organizations and interested parties, that the problem can be solved." Calgary Herald.

Grasped His Opportunity

The furman of the roadmen had been taken ill suddenly, and his right-hand man, Patrick O'Casey, was duly promoted to the post temporarily.

On the foreman's subsequent return he was surprised to find that Patrick the only man working, and inquired as to the absence of the others.

"Where's all the boys, Pat?"

"O'casey took my 'n' then," replied the Irishman, with a grin. "It's not often I have a chance showing me authority, but, indeed, O'casey took my 'n' then."

Cause For Worry

"My wife is always worrying about something."

"Why, what's the matter now?"

"She's afraid whether we'll be in style when my little boy graduates, so that he won't have a chance to show the pretty little diploma on his chin."

Record of Performance Policy

Bringing Improvement To The Policy Of The Dominion

Canadian poultry breeders who are keeping production records of their birds under the Record of Performance policy, are doing a good breeding stock. According to the report of the Canadian Record of Performance, the Dominion Department of Agriculture, at Ottawa, a large number of birds have been sold to foreign countries. The sales that have been made largely through provincial Record of Performance breeders' associations, reached high figure last year. One of these associations is reported to have done \$80,000 worth of business for the members. This was in addition to sales made privately by members within the province. The Record of Performance proper, since its inception in 1904, has tested more than 100,000 birds, almost 60,000 of which have been certified as meeting the requirements regarding hygiene, production, egg weight, breed type, and other characteristics. The flocks that thus distinguished are finding a very great demand for hatching eggs. To provide for this demand, the hatcheries securing their hatching eggs from good stock a hatchery apiece, have been put into operation. This policy provides for the inspection of commercial hatcheries and the flocks from which they secure their eggs. It is under the administration as the Record of Performance policy that is administered by the Dominion Department of Agriculture, at Ottawa. This policy is recognized as providing a very important means of distributing to the general farm flocks of the country the blood of breed-to-birds of high quality.

Develop Tar Sand Field

Comprehensive Work To Be Carried Out In Alberta

Revelation of the enormous sandstone extraction plant built at Dunvegan in 1925; securing of a large supply of separated oil for commercial use; and the construction of new road construction projects using part of this separated oil; consideration of the sandstone field in general, the bridging of gaps in geological information, form the program of work to be carried out in the sandstone field in Alberta. The work will be conducted under the supervision of Dr. K. A. Clark, of the industrial department of the University of Alberta, who has been a pioneer of McMurtry tar sands for many years at the University of Alberta is concerned.

Every Is No Disgrace

There is no disgrace in taking aid from fellow human beings, in a life of poverty and need, and particularly there is no disgrace in being a subject of public welfare. For, after all, it is logically merely cashing in on an insurance policy, having paid a long term of years directly or indirectly, by every citizen corresponding to the premiums.

Teller's Wife: "What kept you late today?"

"The teller: 'I was short 3 cents on my books.'"

Teller's Wife: "Didn't you have any pennies in your pocket?"

"No, I was short 3 cents on my books."

"Keener, Stockholm: 'I was short 3 cents on my books.'"

To Much

Many people two hours after eating, suffer indigestion as they call it. It is usually excess acid. Correct it with an alkali. The best way, the quick, harmless and efficient way, is Phillips' Milk of Magnesia. It has remained for 50 years the standard with physicians. One spoonful in water neutralizes many times its volume in stomach acids, and at once. The symptoms disappear in five minutes.

You will never use cruet methods when you know this better method. And you will never suffer from excess acid when you prove out this easy relief. Please do. Use only your own milk—now.

Be sure to get the genuine Phillips' Milk of Magnesia, prescribed by physicians for 50 years in correcting excess acid. Each bottle contains full directions—any druggist.

Joining England To Europe

German Dream Of Draining North Sea For Settlement Aged Proposed

To restore to Europe the geography of a half-million years ago, when Stone Age cave-men wandered at will across broad, open areas, the English Channel, now rolls; to make England once more a part of Europe in fact as well as in name; to add more than 50,000 square miles of fertile farm land to Germany, Holland, England, and Denmark; to lengthen the Rhine, the Elbe, and other rivers by scores of miles, and to leave many busy European ports, including the great port of Hamburg, a hundred miles or more inland; these are a few of the changes which would be brought about by the most ambitious plan of continental remodeling ever suggested by practical engineers; a scheme recently proposed anonymously in a leading British newspaper, and which has attracted much attention among engineers.

The plan is to dig and maintain the larger part of the North Sea between England, Germany, and Denmark, the great port of Hamburg, and smaller areas have been dyked and drained in Holland.

The southern two-thirds of the North Sea is seldom more than 100 feet deep. Running eastward from the River Humber on the east coast of England to the northern tip of Denmark is a subsequent cliff, once the coast line of Europe when the sea was lower than now. The plan is to build a dyke along this ancient coast line, to place another dyke across the English Channel, and to pump out the sea water from the area thus enclosed.

Rained double dykes, like levees, would carry the Elbe and other rivers across this lowland to the sea.

Giant Passenger Plane

Capable Of Carrying 32 Passengers Across the Atlantic

Anthony Puker airplane manufacturer, announces in New York that within six weeks his factory will complete construction of a giant passenger plane, capable of carrying 32 persons and powered with four 600-horse power motors, which, he said, would be able to cross the Atlantic without difficulty.

Although he predicted regular trans-Atlantic passenger service by airplane within the next five years, Puker said aircraft would never become a serious competitor of steamship lines.

Horace—What is a bachelor, Daddy?

His Father—A bachelor, my boy, is a man who looks before he leaps—and then doesn't leap!

Judge—"The speed limit signs read fifteen miles an hour."

College Student—"But how could I read it when I was going forty?"

FLU Germs Bred In The Throat.

First Appear As A Common Cold, But Gain Tremendous Headway In Six Hours

SOME SIMPLE PRECAUTIONS AGAINST INFLUENZA

Simple precautions taken now will enable you to fight dreaded "flu" which is sweeping rapidly through the whole country. The germs of influenza gain access to the body through the mouth and throat. Keep the throat healthy and you go a long way towards stopping the trouble. An effective means of doing this is to gargle the throat three or four times daily with Nerville. Half a teaspoonful of Nerville in water makes a most efficient gargle. The germ-killing properties of Nerville quickly destroy any bacteria in the mouth or throat. If it is used in sore, if the throat is inflamed, if you have a cough—be sure to rub the neck and chest with Nerville. Every drop of it will rub in, and out will come the congestion.

Of course it is absolutely necessary to house-clean the system with Dr. Hamilton's Pills which stimulate the eliminating organs, and rid the system of disease-breeding germs. This combination treatment of Nerville and Dr. Hamilton's Pills will give prompt and entirely satisfactory results.

Air Service For Miners

Flanes Will Carry Them To North-east British Columbia

A dream of four years is coming true for Frank Woodside, manager of B.C. Chamber of Mines, with the announcement by Major Don R. MacLaren of Western Canada Airways, that a regular job-around mine plane service is to be operated into the northern country from Fort George.

The new service is to start at once with the latest, model of Puker seven-passenger plane. Angus Cruikshank, Tacoma air pilot, and war veteran, has been secured to operate the plane which will work on positions in summer and adults in winter, with its southern base at Summit Lake, 16 miles from Ft. George, and a sub-base with stores and gasoline at Stanley Peaks.

The plane will carry prospectors and miners to lay part of the north country and its radius will take to the far parts of the Arctic Circle. A freight service to mines or prospectors' camps will also be given. A unique detail of the service will be the supply of folding Peterborough canvas to be carried on the plane for the use of prospectors who wish to go into country where canoes are not available.

The plane will also be used this summer for survey and photo-taking of the country north of Sifton Pass and into the Laird River. Major MacLaren announces.

"We have been hoping and working for an airplane service north from St. George for nearly four years and it is certainly going to be a big step for mining industry there," Mr. Woodside said.

B. F. Luny, well-known mining operator, who, recently bought a large plane and has been trying it out at Vancouver, proposes to start a service from there to Dease Lake country, Mr. Woodside states. This service will start in the near future, and will cut the time of engineers and prospectors by several days.

Solidity Reduces Sentence

Many Criminals In France Prefer Solidity For The Reason That

In France's modern prison at Fresnes-Rungis, 1250 white-mailed prisoners live in absolute silence. They neither see each other's faces nor hear their voices. From the moment a metal number is hung around his neck, the prisoner is required to wear a white hood whenever he leaves his cell and he may not speak to his fellows. He sees the face of his guard from time to time, but no other, unless he is sent to the hospital or to the ward for discipline. Alone in his cell, he works eight hours a day, but good will and still enable him to reduce the time to six hours and the money he earns enables him to buy small comforts. The government receives thirty-two cents a day from contractors for each prisoner's work and gives from three tenths to half the money to the prisoner. The prisoner never sees the money till he leaves half of it to be placed to his immediate credit for his little expenses. Yet in spite of all that many criminals seem to be content here because the solitude entitles them to a reduction of one-fourth of their sentence.

Everything In A Name

People Of Importance Usually Get What They Want

Recognition or honor others when, dressed in plain clothes is a matter which frequently gives trouble to the rank and file in the services. The same difficulty arises in the Metropolitan police, where a good story is told of Lord Byng visiting a suburban station shortly after his appointment. The door was guarded by a man who said "Can I come in?" and the chief commissioner, "I don't think so," replied the officer. "The inspector is out." "Well, can you send for him?" "Yes, if it is important. What name shall I give?" "Byng." The alacrity that followed dispelled any doubt about the quest "What's in a name."

Homestead Entries

Homestead filings for the first months of the year numbered 1,416, as compared with 1,006 for the same two months of 1926. Alberta entries amounted to 702 as against 502 in January and February of 1926; Saskatchewan's were 586 against 430; Manitoba's 78 against 74; and British Columbia's 41 against 30.

The Royal Northwest Mounted Police consists of only a few hundred men, yet they patrol and maintain order in a territory of 1,300,000 square miles, half of which is inside the Arctic circle.

Scientist Makes New Discovery

Says Milk Treated By Witches Waves Kept Sweet For Weeks

An "Austrian scientist" claims to have discovered a method by which milk treated by witches waves of short length can be kept sweet for three or four weeks. The new "witches milk" is produced by passing an intense beam of short wave through the liquid. This is said to kill all germs which cause milk to turn. The milk itself is not heated by this treatment, and does not acquire a "cooked" taste.

Little Helps For This Week

"Consider the lilies of the field."

Matthew v. 28.

Consider them, the lilies.

O heart of mine, today:

They neither toil nor spin to win their beautiful array.

I would that thou couldst lead a life

So fearless, sweet as they.

—Margaret R. Stewart

There is a wave meaning and a gracious design in every that of the lily's adornment and every curve of its grace. Its symmetry is a type and proof of the divine justice. Its life is co-ordinated, and keeps time with the sublime motions of the heavens, and its structure and uses are full of the profound teachings of the unsearchable God. And if God thus cares for an individual flower which today is, and tomorrow is cast into the oven, how much more will He care for an individual human being whom He has made in His own image, and upon whose life He has made such momentous issues to depend.—Hugh MacLellan.

Auction Sale Of School Lands

Nearly \$400,000 was realized from the auctioning of school lands, all within a radius of forty miles of Regina, the other day. The number of quarter sections sold were 396 out of 381 listed for sale, and the average price realized was \$1250 per acre, the total amounting to \$399,434.00.

Potash In British Columbia

Large Scale Fertilizer Industry To Supply The Needs Of Prairie Farmers

"Substantial fortunes are awaiting the prospectors who unearth some of the potash believed to be stored away in the mountains of British Columbia," said George H. Kilburn, of the Consolidated Mining and Smelting Corporation, which is working out a large-scale fertilizer industry at Trail to supply the needs of the Prairie Provinces. Mr. Kilburn mentioned that the company is making free analysis of potash specimens submitted so as to assist prospectors.

GOOD IN EVERY WAY

Baby's Own Tablets Banish Bishydro and Childhood Ailments

A medicine that all mothers praise and good in every way—one that will quickly banish the minor ills of babies and childhood is the medicine to keep in the medicine chest, to always have on hand in case of emergency. Such a medicine is Baby's Own Tablets—they are helpful at all times. They are a mild but thorough laxative which by regulating the bowels and stomach banish colds and simple fever; correct colic and diarrhoea and make the cutting of teeth easy.

Thousands of mothers use no other medicine for their little ones. Among them Mrs. J. H. Bromley, of Seattle, Ohio, who writes:—"I have four children and whenever any of them are ill I always use Baby's Own Tablets—they have found them good in every way. I would not be without the Tablets and would also like your little booklet 'Care of Baby in Health and Sickness.'"

Baby's Own Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Saskatchewan Pansies For Clays

Saskatchewan has a greater variety of clays, in larger quantities and of the higher grades, than any other Canadian province, and will, without doubt, become the centre of a very important ceramic industry. The clays of Saskatchewan have been the subject of special investigations by the Department of Mines, Ottawa.

There are more than 1,024,000 persons by the name of Johnson in the United States.

The average horn will blow 150,000 times before wearing out.

Your Skin In SPRING Needs ZAM-BUR

Quickly restores complexion to its natural beauty. Removes all blemishes, freckles, and spots. Keeps the skin soft and smooth. No oil or grease.

Saving Seven Seconds

Many Motorists In Attempting It Have Lost Their Lives

It has been established that seven seconds is the average length of time it takes a fast railroad train to get by a level crossing. That isn't a long period of time to the living, but it has unusual elasticity to many thousands of motorists who couldn't spare the seven seconds. They risked their lives to save them. Most everybody, in motor cars, has been hurried to cross a railroad track ahead of a train, so that they wouldn't have to wait. Some others waited the seven seconds so lightly they paid with their lives for them.

An Oil That Is Pansies.—Though Canada was not the birthplace of Dr. Thomas' Electric Oil, it is the home of that famous compound. From here its good name was spread to Central and South America, the West Indies, Australia and New Zealand. That is far added enough to attest its excellence, for in all these countries it is on sale and in demand.

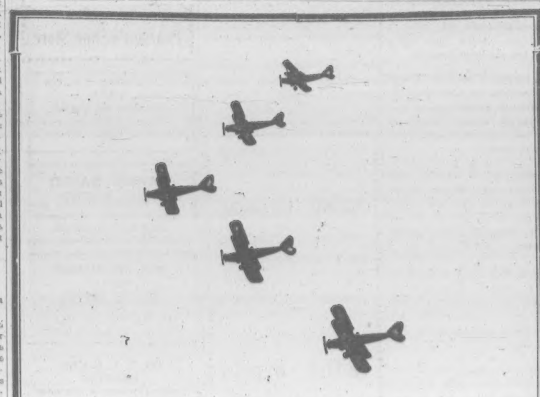

The Man: "Whether marriage is a failure or not, I certainly think that some are more fortunate than others in what they get."

His Wife: "Yes, I quite agree. For instance, you got me, but I only got you!"

Aching Feet

Swollen and sore from a day's strenuous work can be relieved by Minard's Balm in warm water solution.

SETTLERS
Guard your
Slash Fires!

Wood is the settler's winter harvest. When his own land is cleared he may still obtain employment in the neighbouring forest. By care with fire, the wise settler protects his own living.

Issued by authority of
Honourable Charles Stewart,
Minister of the Interior.
